## SSRS enhances its functionality

**An increasing number of ships transiting the Indian Ocean are using citadels as part of their layered defense strategy.**

To support their ship owners and operators, SSRS now allows them to include their citadel satellite phone number to their ship registration details.  This additional information will automatically (and securely) forwarded to the relevant Naval Operations Centres as soon as the SSAS has been activated on their ship.

As always, information about your vessel will only be shared with naval authorities in the event of a real alert.

With over 700 vessels now registered to SSRS, and an increasing number of naval authorities using the system as an integral part of their piracy response strategy, we understand how vital this system has become, and how important it is that we support all the various ship security measures used by commercial shipping.
